Professional Summary

Entry-level developer and data practitioner with hands-on project experience in analytics, machine learning, natural language processing, and Java backend development. Built reproducible Python data pipelines, Power BI-ready analytical models, scikit-learn regression and text-classification workflows, and tested Spring Boot and JavaScript applications. Seeking an entry-level role in data, machine learning, software engineering, or backend development.

Technical Skills

Languages: Python, SQL, Java, JavaScript, HTML, CSS

Data and Business Intelligence: pandas, Power BI, DAX, data cleaning, data quality testing, Matplotlib

Machine Learning and NLP: scikit-learn, gradient boosting, regression, interval calibration, TF-IDF, logistic regression, confidence thresholds, model evaluation

Backend, Web, and Tools: Spring Boot, REST APIs, browser storage, Git, GitHub Actions, Vercel, pytest, JUnit, Node.js test runner

Project Experience

BigTech Electronics Store

Jun 2026 - Present

Java Backend and Web Project | github.com/harikareddy9878-rgb/bigtech-electronics-store

- Developed and deployed an Indian electronics storefront using JavaScript, HTML, CSS, Java 17, Spring Boot, REST APIs, and Vercel; connected search, a 28-product catalogue, cart, checkout, order history, and Ezzie support.
- Implemented inventory reserve, commit, release, and rejection paths across three checkout outcomes and eight delivery stages; verified browser and backend behaviour with 17 JavaScript and JUnit tests.

CivicRoute Service Request Triage

Mar 2026 - May 2026

Natural Language Processing Project | github.com/harikareddy9878-rgb/civicroute-service-request-triage

- Prepared 175,784 public service requests into 36,805 deduplicated examples across eight queues, then trained an interpretable TF-IDF and class-balanced logistic regression routing pipeline.
- Evaluated category-group generalisation at 0.974 macro F1 with 84.8% automatic coverage and 99.9% accepted-route accuracy; routed low-confidence and short requests to manual review.

MetroRent Price Estimator

Aug 2025 - Dec 2025

Machine Learning Project | github.com/harikareddy9878-rgb/metrorent-price-estimator

- Combined and cleaned 21,691 public rental listings with Python and pandas, producing 12,201 model rows across five cities and 2,102 localities for gradient boosting regression.
- Tested on 1,831 unseen listings and reduced MAE to INR 11,652 from an INR 22,122 city-median baseline; calibrated an 89.7% coverage prediction interval and reported city-level errors.

CareMap Facility Analytics

Feb 2025 - May 2025

Data Analytics and Business Intelligence Project | github.com/harikareddy9878-rgb/caremap-facility-analytics

- Cleaned 200,438 public health-facility records with Python and pandas, removed 6,655 duplicate signatures, and produced 193,783 validated records across 36 state and union-territory labels.
- Prepared a four-page Power BI model and governed DAX measures for national coverage, state comparison, facility mix, and data quality; validated 99.7% coordinate coverage with automated tests.

Education

Bachelor of Technology in Computer Science

Graduation: Jun 2026

Institution: [add institution name], India
